## innovating power.

Innovation with a lot of experience in the reliable supply of power - that is what characterizes the products of EFFEKTA. We devise what is meaningful and technically proven for standard applications and for special solutions. Moreover, we are pleased to tackle that task with an additional quantum of safety, comfort and service. You can convince yourself of this by consulting the following pages of this catalog.

### Company

What started out in 1984 as a small company by the name of HJ Elektronik is now one of the leading manufacturers of uninterruptible power supply (UPS) units: With around 80 employees, we work on a daily basis to provide ever better products and services.

Starting with uninterruptible power supply units as our core product, we have extended our portfolio over the years - expanding our expertise at the same time: As well as UPS units in the office sector and for mounting in 19" racks our product range now also includes rectifiers and inverters for solar power generation as well as power packs, accumulators and battery monitoring systems.

#### Special units

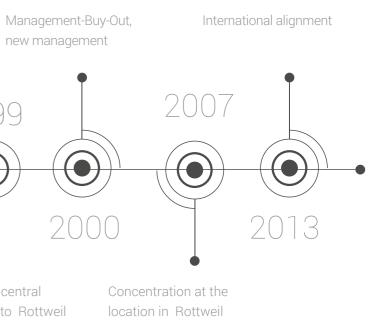

Our commitment is embodied in more than innovative products in meaningful configurations for the data processing market: We also deliver conviction on a significant scale in industrial applications and in

Change of name to EFFEKTA® Management Regeltechnik GmbH 1999 1984 1999 1990 21 Founding of HJ Elektronik Sales function to Rottweil

other sensitive areas. We provide companies such as Berliner Verkehrsbetriebe, Daimler AG, Siemens AG, Deutsche Telekom AG, BASF AG, Bayer AG (Leverkusen) or the German Aerospace Institute [Deutsches Institut für Luft- und Raumfahrt] with bespoke uninterruptible power supply units. This enables our products to provide a vast array of devices, some of them extremely sensitive, with very reliable protection.

#### Service

The high performance standard of our services is as central to us as the quality of our products: Maintenance, repair and emergency service for all of our products and systems comprise a firm part of what we offer – regardless of whether the order is for a small UPS unit for the office or for a bespoke system in a sensitive industrial environment. EFFEKTA has always defined service with this motto: You can depend upon us.

### Bespoke solutions

Special requirements often require special solutions: EFFEKTA has always set itself specialist tasks of this kind, and has consistently risen to the challenge supremely well. However, what is it that makes a special solution from EFFEKTA so beneficial for the customer?

#### Customer-specific configuration

Other companies turn to their existing portfolio to assemble a solution that goes just some way to meeting customer requirements. In contrast, we at EFFEKTA go further and configure an entirely new UPS unit to meet the needs of a customer with targeted precision. We base what we do on more than the wishes of a single customer: We bring our experience to bear, and propose a design that is not only cost-effective but also technologically the most appropriate one, with the best credentials for a long-term future. After all, nothing is more aggravating than to find, year down the line, that a UPS unit configured at one point in time is no longer capable of meeting more recent requirements.

#### Customer-specific service

The spectrum of services that EFFEKTA is capable of providing far exceeds the configuration, installation and commissioning of a customerspecific bespoke solution. We are always pleased to provide continuous inspection and maintenance of units installed by ourselves – your advantage as a customer with an EFFEKTA service contract: You can always be certain that your UPS units are always technically right up-to-date and are capable of meeting defined requirements. Furthermore, you can also depend upon us to keep you posted on sensible improvements to make to your unit – whether technical or commercial in nature.

#### Complete packages for a complete price

You probably wish for more than a one-stop shop for the design, installation and maintenance of your UPS unit, specifically also wishing for peace of mind in terms of spare parts and battery replacement. Please ask us about our complete packages that cover all conceivable forms of service support for your desired period of time. If you so wish, also as a leasing package!

## Best practice

Nothing illustrates what is possible as effectively as an example: We have therefore put together, in concise format, a couple of Best Practice stories and references.

### Energy-saving elevator UPS in 'Climate House' in Bremerhaven

Albert Schenk GmbH & Co. KG was immediately faced by two basic requirements to satisfy in its project at 'Climate House Bremerhaven 8° East' (left photo), specifically in relation to the traditional OSMA elevators: The objective not only entailed implementing the energy efficiency stipulations of VDI standard 4707 for no fewer than seven elevators, but also to provide autonomous power to stationary elevators in a way that entails the lowest possible level of power consumption. There was also a question of resource conservation - a key promotional claim of this Climate House - the aim being to build an energy-efficient structure that delivers a low environmental impact. Through a consistent policy of optimization, EFFEKTA succeeded with its 'MTD Industry' version of UPS to develop an uninterruptible power supply system with a very low power consumption, positioning it by as much as 70% below the standard power consumption level of standard UPS units on the market.

#### Standard power supply units for MERCK KGaA

Since 2008, UPS units from EFFEKTA have been deployed on the premises of MERCK parent company plant to protect the entire production site in the event of mains power failures. Until MERCK began its collaboration with EFFEKTA, it used units from a number of different manufacturers. This made the inspection and maintenance of their units a complex matter. Working jointly with the customer, EFFEKTA developed a complete UPS system

for this production location with features such as virtually indefinite scalability, maximum availability, optimum redundancy and simple troubleshooting. For MERCK, EFFEKTA implemented a comprehensive leasing package that includes the UPS units, their installation on the site, the commissioning process and a complete maintenance management system – giving this customer an extremely dependable and transparent overview of the costs involved.

#### A scalable UPS, one able to meet the growing needs of the IT faculty at the Technical University of Vienna (TU Wien)

The dedicated main server at the IT faculty at the Technical University of Vienna is a central instrument all of its research, tuition and administration. It will come as no surprise to learn that the faculty needs very particular requirements to be satisfied for these technical service providers. As early as 2015, it became apparent that the 80 kVA unit installed in 2010 would soon become insufficiently powerful to meet growing levels of need. A new, modular UPS unit was therefore installed to meet future levels of demand. At that time, the initial performance rating of 160 kVA was sufficient to meet the forecast needs of the next 5 years. It therefore provided plenty of cover for initial needs and can be expanded up to 320 kVA. An external bypass is incorporated for problemfree maintenance of the new UPS unit to disengage the EFFEKTA UPS unit fully from the system whenever service is required, or a malfunction needs to be remedied.

## Sector-based expertise

We are grateful to our many years of experience for the frequent opportunities these have provided for meeting customers from new sectors, other world regions and to get to know their needs. We have therefore gathered a great deal of expertise in the design of UPS units, all of which benefits our customers as we continue to perfect the design of the EFFEKTA range of UPS units. Here is a summary of some of the aspects we include when planning bespoke solutions or UPS units:

Extreme temperatures Depending on its planned location, an EFFEKTA UPS can also be prepared to cope with more extreme temperature ranges, enabling them to function reliably under conditions of extreme cold or of great heat.

#### Humidity If there is of an EFF

If there is ever a risk of an EFFEKTA UPS being exposed to high levels of humidity and condensation, we can take due account of that in advance, at the design stage of a unit, to minimize the incidence of short circuits.

#### Mechanical loads

For environments in which mechanical loads can be applied to the EFFEKTA UPS we are able when called upon to do so to deliver a rugged design for the housing, with robust display, connection and operating technology.

# E E

#### Extreme altitude

When air gets thinner, it has less of an insulating function: On request, we can adapt EFFEKTA UPS units to cope with installation locations at extreme altitudes. This involves a specialist design and optimum insulation.

#### Dust

In unusually dusty environments, we take special precautions to protect the electronic control unit. This ensures that EFFEKTA UPS units do not capitulate when faced with dirty environments.

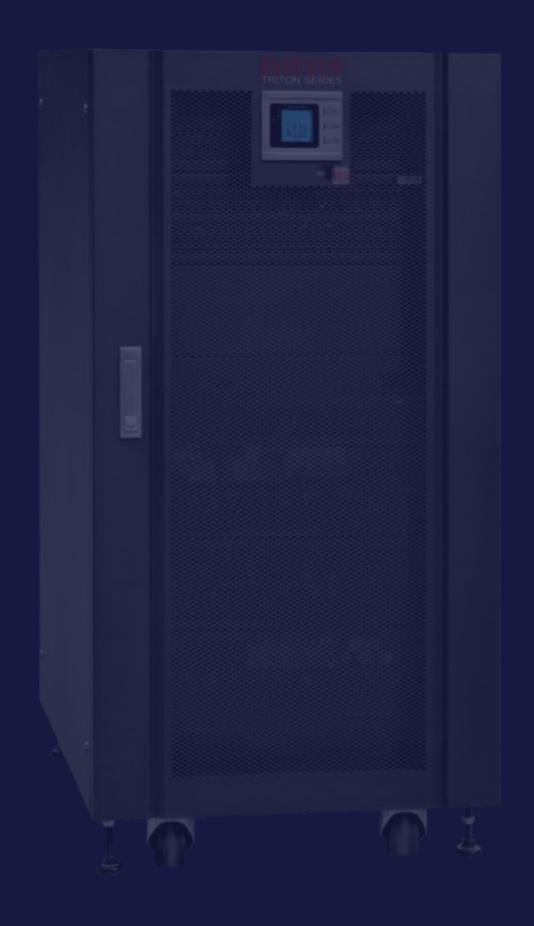

#### Aggressive atmosphere

In environments where corrosion-provoking gases or other air-related factors are present, we use specialist materials in the design of your EFFEKTA UPS unit to assure functional durability.

### UPS/AC Power supplies

### **EFFEKTA**<sup>®</sup>

## UPS classification

Mains disturb	ances and the	proper UPS						
For	Mains disturb	oances						
protection suitable UPS class	power failures >10ms	Voltage fluctuations < 16ms	Peaks 4-16ms	Continuous undervoltage	Continuous overvoltage	lightning effects	Voltage surges (Surge) <4ms	Frequency fluctuations
VFI	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$
VI	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$	x	×	×
VFD	$\checkmark$	$\checkmark$	$\checkmark$	×	x	x	x	x

To supply a load with uninterruptible power, different technologies are used. To distinguish them technically correct and to evaluate their protection, the standards EN 50091-3 and IEC 62040-3 are used:

- VFI Output Voltage and Frequency Independent from mains supply
- VI Output Voltage Independent from mains supply
- VFD Output Voltage and Frequency Dependent from mains supply

### Comparison

New definition	Old definition
<b>VFI</b> UPS output frequency independent of power, voltage and fre- quency fluctuations within the limits according to IEC 61000-2-2	- On-line - Double conversion
<b>VI</b> UPS output frequency depending on the mains frequency, voltage (electronic / passive) stabilized within the limits of normal operation	- Single Conversion - Delta conversion - Line-Interactive
<b>VFD</b> UPS output frequency depending on voltage and frequency variations of the power grid	- Off-line - Stand-by

### ■ Line Interactive Systems (VI) ■ Online double conversion (VFI)

#### Features

- Short switchover time
- Bi-directional inverter
- Output voltage SINE WAVE predominantly / partly RECTANGULAR
- Good price performance ratio
- Booster function

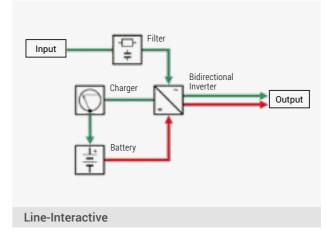

#### Applications

- PBXs
- Workstations
- CAD systems
- SPS systems
- Small Servers

#### Models

- Office Home (VFD)
- Office series
- MI-RM series (19")
- MTX series
- MTD-RM series (19")
- MTD-XL-RT series

### Switching principle

#### Features

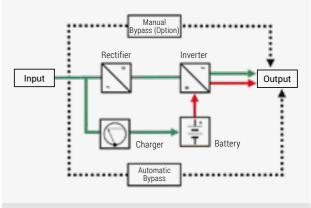

- Safest UPS technology
- Protection against all conducted disturbances
- Stable output voltage
- No switching delay period
- Bypass function

#### Applications

- PBXs
- Workstations
- Servers
- Measuring systems
- Medical equipment (without life supporting!)
- Critical industrial / IT applications

#### Models

- MCI series
- MKD-RT (Racktower)
- ADIRA
- MHD Modular
- TRITON
- THOR Modular

## Line-Interactive / VFD **Office-Home series**

The OFFICE Home range made by EFFEKTA® protects your office equipment, such as PCs and their peripherals, from mains power failures. The compact dimensions of this UPS unit enable the UPS system to be incorporated elegantly in the most confined of spaces.

Another special feature of this UPS is its integrated multiple-function connector strip. It features 3 isolated ground receptacles with a UPS function and 3 isolated ground receptacles for overvoltage protection. All relevant information is displayed on a backlit LCD display with touchscreen.

# Line-Interactive Office series

EFFEKTA®s OFFICE is suitable to protect your office equipment as PCs and peripherals from power outages. It is available in sizes 400, 600, 800, 1000, 1500 and 2000VA. With the compact dimensions of these UPS it finds its place even in the smallest office in your company or at home.

The availability of the power is significantly improved and operation could not be simpler. All relevant information is displayed on a backlit LCD display with touch screen.

# Line-Interactive MTX series

The MTX is a modern line-interactive UPS with a power factor of 0.9. It is available with power ratings of 800, 1100, 1500, 2000, and 3000 VA.

All of the important information about the UPS can be viewed easily on the illuminated LC display. The sleek design of this quiet unit blends seamlessly into any office environment.

To provide uninterruptible power for even longer periods, the capacity of MTX UPS units can be extended by adding external battery packs, available as optional extras.

### Details

Rear view of MTX 800/1100, 1500, 2000 and 3000

battery pack

### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- Additional battery modules to provide an uninterruptible power supply for up to several hours
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down

### Characteristics

- UPS-classification VI-SS-311 (IEC 62040-3)
- Line-Interactive technology
- Sine wave output
- High efficiency (> 97%)
- Automatic frequency detection & self-test
- Automatic restart when mains power is restored
- Cold start function (starting in battery mode)
- Hot-Swap
- Slot for additional (relay contacts / SNMP card)
- Management software
- 24 months' warranty

# Line-Interactive **MTD-RM series**

The MTD-RM series is EFFEKTA®s' further development of the line-interactive MT-RM-series. It protects sensitive consumers from power blackouts, spikes and other disruptions. Areas of application are computers, remote telecommunications and other computer-aided systems.

The unit's compact and stable construction has been complemented by a convenient LCD display for easier operation.

### Rear view

MTD RM 1U (700-1500) or 2U (2000 VA)

MTD RM 3U (3000 VA)

### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down

- Automatic frequency detection
- Equipped with RS-232 port as standard
- Slot for optional adapters: relay-card,
- opto-coupler, USB or SNMP
- Management software
- 24 months' warranty

### **EFFEKTA**<sup>®</sup>

# Line-Interactive **MTD-RT series**

The MTD RT and MTD XL RT is EFFEKTA®'s high-end line-interactive version of the MTD series. The back-up time of the XL-models can be extended by additional external battery packs in a unified design.

Its RackTower housing and the rotating LCD display allow both the use as a tower unit as well as installation in 19" cabinets.

### Rear view

#### MTD 1000 / 1500 RT

MTD 2000 RT und 3000 RT

All MTD RT models offer at least 8 IEC C13 (10A) Consumer outputs.

### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- Additional battery modules to provide an uninterruptible power supply for up to several hours
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down

### Characteristics

- UPS-classification VI-SS-311 (IEC 62040-3)
- Line-interactive technology
- Excellent power factor of 0.9
- High efficiency (> 97%)
- "RackTower" can be used both as a standalone unit, as well as a 19" rack mount unit
- XL-models expandable by external battery packs
- Huge input voltage range
- User-friendly LCD display with backlight

# Online double conversion MCI series

The MCI is EFFEKTA®'s newest online double-conversion UPS with power factor 0.9. It is equipped with an electronic bypass and is to be applied with supersensitive and critical applications like servers, workstations, measurement technology or industrial plants

For full control and monitoring, it provides each one USB and RS232 interface and can be supplemented via its slot by optional communication cards.

All models can be extended in the autonomy time through external battery packs. The XL versions increase this possibility by larger chargers.

# Online double conversion MKD-RT series

The MKD-RT is EFFEKTA®'s high-end model in the field of high-quality microprocessor-based online double conversion UPS's for your IT environment or metrology and industrial plants.

The MKD-RT is already equipped with extensive and specific features, which are usually provided in the UPS market by most expensive special UPSs. The programmable switch contacts, or the adjustable restart function are just two of countless examples. The XL versions also offer the possibility of battery extension.

- Automatic frequency detection
- Output frequency preset
- Extensive communication & control
- Programmable switch contacts as standard
- Emergency power-off "EPO" as standard
- Slot for another optional adapter
- Management software
- Operation of a frequency converter is possible
- 24 months' warranty

### **EFFEKTA**<sup>®</sup>

# Online double conversion MKD-RT, 6-10 kVA

The compact MKD-RT models with 6 and 10kVA offer high power in a small space. It's already equipped with extensive and specific features, which are usually provided in the UPS market by most expensive special UPSs. The programmable switch contacts, or the adjustable restart function are just two of countless examples.

The XL versions also offer the possibility of battery extension.

### Details

MKD RT 10 kVA

MKD RT 6 kVA

With existing standard RS232 and USB interface as well as standard emergency contact (EPO).

### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- Additional battery modules to provide an uninterruptible power supply for up to several hours
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down
- Extended warranty arrangements
- Customer-oriented individual service and maintenance contracts

### Characteristics

- UPS Classification VFI-SS-111 (IEC 62040-3)
- Online double conversion
- Can be used as tower as well as 19"-unit
- User-friendly rotating LCD display
- Optional XL version with expandable batteries
- Wide input voltage range (120-276VAC)
- Excellent power factor of 0.9
- Hot-Swap: Batteries can be replaced while the system is operating

- With sinusoidal output switchable to ECO mode
- Microprocessor controlled
- Automatic frequency detection
- Output frequency preset
- Extensive communication & control
- Emergency power-off "EPO" as standard
- Slot for another optional adapter
- Management software
- 24 months' warranty

### **EFFEKTA**<sup>®</sup>

# AC large UPS ADIRA 6-10 kVA

With its compact design, the ADIRA can be used on a very limited space. Its back-up time can be extremely flexible extended with external battery packs.

Due to the continuous development of our UPS technology the ADIRA offers you an improved sinus quality and a power factor of 0.9.

The usage of IGBT rectifiers reduces the distortion of dependent mains. The current drain is almost ideally sinusoidal.

### Rear view

Adira 6 kVA 1/1 ph

Adira 10 kVA 1/1 ph

#### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- Additional battery modules to provide an uninterruptible power supply for up to several hours
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down
   Extended warranty arrangements
- Customer-oriented individual service and maintenance contracts

### Characteristics

- UPS classification VFI-SS111 (IEC 62040-3)
- Online double conversion
- PFC rectifier with IGBT technology
- High efficiency
- Sine wave output
- Digital signaling processor
- Clearly arranged LCD display
- Compact design
- USB interface as standard
- Expansion Slot for SNMP card
- 24 months warranty

# AC large UPS **TRITON M1**

With the TRITON EFFEKTA® offers a modern, modular design, online double-conversion UPS with 3-phase input & output.

The system is operated with a power module from 10 to a maximum of 40kVA. In this way, the TRITON achieves a very high power density. Further up to 4 of these systems can be operated in parallel.

10, 15 and 20 kVA are optionally available with a power factor of 1.0

# AC large UPS TRITON M2

With the TRITON EFFEKTA® offers a modern, modular design, online double conversion UPS with 3-phase input & output.

The system is operated with two 30 or 40kVA power modules. Further up to 4 of these systems can be operated in parallel.

The power modules allow easy maintenance and replacement and therefore low service costs (very low MTTR value).

1		
10	0111	 ŗ

### Details

Modules accessible from the front

To make commissioning, operation and maintenance as simple as possible, the modules as well as all controls and interfaces can be accessed from the front.

The intelligent slots provide expansion options for additional communication boards.

### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- Additional battery modules to provide an uninterruptible power supply for up to several hours
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down
- Extended warranty arrangements
- Customer-oriented individual service and maintenance contracts

- High output power factor (0,9)
- EPO (remote shutdown)
- Temperature-controlled fan
- 3-step gentle battery charging method
- Extensive communication interfaces
- Management software for all common OS
- 24 months warranty

### **EFFEKTA®**

### **EFFEKTA®**

### Characteristics

- UPS classification VFI-SS-111 (IEC 62040-3)
- Online double conversion with sinusoidal output
- Large input voltage range
- Excellent power factor of 0,9
- Power factor 1,0 at 10/20kVA/kW modules
- High input power factor up to 1 (0.99)
- High efficiency (up to 95%)
- Switchable to ECO mode (up to 98%, line-interactive)
- Modular N + X parallel redundancy
- Parallel operation for up to 13 modules per cabinet

### Power module

#### Single power module

The THOR Modular can be equipped with modules 10 to 40kVA depending on the system series (see table on the next page).

The modules are extremely compact (only 3U) and provide high power density. Each module contains its own charger and remains independent operational even in case of failure of the control unit. They can be replaced during operation with little effort, maintained or can be extended by additional modules.

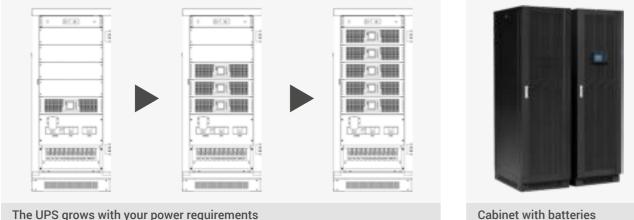

# Modular UPS system **THOR Modular**

THOR Modular is EFFEKTA's new scalable online double-conversion UPS system with 3-phase in- and output. The system is available with a output power range of 10 up to 520kVA and can be equipped with modules from 10 up to 40kVA.

Further including up to 4 of these systems can be operated in parallel.

### Details

The UPS grows with your power requirements

### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- Additional battery modules to provide an uninterruptible power supply for up to several hours
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down
- Extended warranty arrangements
- Customer-oriented individual service and maintenance contracts

- High power density (up to 520kVA/cabinet)
- Monitoring and control via touch screen LCD panel
- EPO (remote shutdown)
- Extensive communication interfaces
- Management software for all common OS
- Battery voltage adjustable
- 100% suitable for load imbalances
- Temperature-compensated battery charge
- Programmable "service indicator"
- 24 months warranty

- Back view (module 10/20kVA)
- Very wide input voltage range
- Low THDI <3%
- Output power factor 1 (10/20kVA modules) or ≥0.99 (30/40kVA modules
- Large input voltage window
- Each module with its own mains and bypass
- Modular N + X parallel redundancy
- Compact modular design (3U)

### **EFFEKTA**<sup>®</sup>

The modular and redundant design of the THOR system ensures high reliability and availability. When configuring N + X parallel-redundancy, the load is immediately redistributed without interruption on the remaining modules if one module fails.

In case of faults or to general maintenance the modules can be removed during operation and / or replaced by new ones. As well as all THOR Modular systems can be extended on the fly without much effort with additional modules. Because of this "hot-swappable" feature any reduction in the current operation of your consumer is avoided. This helps you to improve efficiency and avoid costs. The modules of the EFFEKTA THOR® Modular meet the highest technical standards of reliability and efficiency. The only 3 U high modules preserve sensitive loads from power blackouts, line noise, voltage and current peaks, frequency interference and disturbances caused by switching on the power grid and other risks.

### Cabinet module configurations

THOR Modular T1**

# Modular UPS system MHD Modular

MHD Modular is a scalable single phase or three-phase double-conversion UPS and can be configured to a capacity of 4-24kVA with maximum 6 modules. It can be configured to parallel redundancy which provides the maximum reliability. And delivers power output per modules from 4kVA to 24 kVA.

Each UPS system includes maximum six UPS modules that each module is operating independetly. If any one UPS module fails, the load is instantaneously redistributed among the remaining modules and the defective UPS module is automatically taken off-line from the system.

### Details

Retrofit expansion of the system is possible

Additional modules can be installed to the MHD Modular during normal operation without much time and effort. This hot swappable methode provides subsequent extension of the UPS system without any disturbance of normal operation of the users, so this system provides safing of costs.

Also the possibility to change defective modules during normal operation without any disturbance of the users leads to more safing of costs.

### Options for extended communication and maximum availability:

- SNMP/web or relay card for monitoring in network environments
- Additional battery modules to provide an uninterruptible power supply for up to several hours
- External manual bypass for planned UPS maintenance work or replacement of the UPS unit without shutting it down
- Extended warranty arrangements
- Customer-oriented individual service and maintenance contracts

- Clearly arranged LCD display
- Modular battery extension
- Optionally incl. BACS battery management
- Compact design
- Little weight
- RS232, RS485 and expansion slots
- 24 months' warranty

# Industrial specials PEGASUS II Industry EA1

PEGASUS II Industry IP54 Model EA1 is available in various versions from 10-40 kVA.

For industrial use or projects with special requirements on UPS technology, EFFEKTA® develops individual systems. Protection category IP54 means that the UPS system can also be installed in challenging industrial environments.

Other bespoke solutions, ones tailored to meet the requirements of an individual customer, such as special colors or warning colors, ventilation systems or others are possible.

**EFFEKTA®** 

### Characteristics

- UPS classification VFI-SS111 (IEC 62040-3)
- Online double conversion
- Batteries inside the UPS cabinet
- PFC rectifier with IGBT technology
- Modular technology
- Output either 1- or 3-phase
- High efficiency
- Digital signaling processor
- Modules with progressive self diagnostics
- Clearly arranged LCD display
- RS232 and expandability for various interfaces
- 24 months warranty

### Special features

- Protected IP 54 cabinet system
- Pull-UPS electronics for service purposes
- Socket for easy wiring
- Special ventilation system (optional cooling unit)

### **EFFEKTA**<sup>®</sup>

# Industrial specials PEGASUS II Industry GA1

EFFEKTA® develops individual systems for industrial use or projects that present unusual requirements on UPS technology.

This model is available in various versions, from 10-40 kVA. Protection category IP54 means that the UPS system can also be installed in challenging industrial environments.

Other bespoke solutions, ones tailored to meet the requirements of an individual customer, such as special colors or warning colors, ventilation systems or others are possible.

### Characteristics

- UPS-classification VFI-SS-111 (IEC 62040-3)
- online double conversion
- PFC rectifier with IGBT technology
- Modular construction
- Pull-power modules
- Output either 1- or 3-phase
- Modules with comprehensive self-diagnostics
- High efficiency
- Sine wave output
- Digital signal processor
- Clearly arranged LCD display
- RS232 and expandability for various interfaces
- 24 months warranty

- Protected IP 54 cabinet system
- Special color according to customer specifications
- Pull-UPS electronics for service purposes
- Long periods of autonomy are possible
- Socket for easy wiring
- Special ventilation system (optional cooling unit)

### **EFFEKTA**<sup>®</sup>

# Industrial specials MTD Industry

The MTD industry for lifts is an EFFEKTA special production. This line-interactive UPS is specifically designed for the requirements of elevator controls.

The low internal power consumption of less than 10 watts helps operators of elevators to achieve a more favorable energy rating.

The batteries are housed in an external enclosure and can be replaced during operation. The entire UPS is extremely compact and prepared for wall mounting.

Special features

Separately removable battery holder

Messages via relay: Bypass status

saving mode, Battery test

Messages via optocoupler: Battery LOW,

Programmable functions on input: Standby / power

Automatic bypass

UPS fault

### Characteristics

- UPS classification VI-SY-333 (IEC 62040-3)
- Output Power: 1200VA / 800W
- Input voltage: 230 (162-290) VAC, 50Hz
- Output modified sine
- Autonomy time: about 3 minutes at 80% loadt
- Batteries: 2 x 12V / 9Ah
- Maintenance-free sealed lead-acid batteries

### Details

Rear view

Battery (on the left) and USV (on the right)

# Special appliances

EFFEKTA® UPSs are not only suited for use in computers, but also for all sensitive, power-dependent units.

We have a solution for every kind of application. We are also experienced in custom designs and small production runs. All models are available in standard enclosures or ac be supplied for switchboards or DIN rails.

GSV

UPS MTD-RT 1000 VA standard model

Identical UPS, but with lockable IEC female connectors

Powermanager

The GSV is intended to provide the needed power to electric drive units for doors during powerfailures in emergency situations. The GSV provides up to 72 h standby mode and after that about 5 min with 500 W load. The system can be activated by an external dry contact. During a powerfailure after a delay (10 seconds default) a signal switch (500 ms impulse) will be sent to activate the electric drive unit. Back in normal mode the mains will be switched directly to the output. In normal mode the GSV-system is charging the internal batteries and in emergency mode it monitores the battery voltage.

For customers with particular safety requirements, special versions of standard UPS units can be manufactured. Examples include devices with lockable IEC female connectors to protect connectors from being pulled out accidentally.

The Power Manager was specifically designed for industrial systems. Online double-conversion with integrated auto bypass. Mounting height 4U, to achieve a shortened modular depth of 300mm. All power lines, outputs and sockets for control signal (floating contacts) on hardwired Phoenix terminals. Optimised for 19" switch cabinet

### **EFFEKTA**<sup>®</sup>

# UPS management **Software**

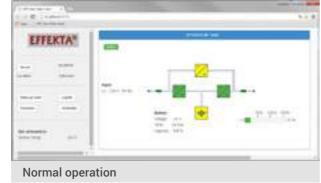

The UPS management software solution PowerShut Plus runs as a client/server application for heterogeneous networks or local computers. It works on all common Windows OS, Novell, Linux and all current Unix derivatives. It also includes an SNMP agent for Windows NT and Novell. All Servers on the network can be shut down via RCCMD (Multiserver-Shutdown). The software provides all important UPS information such as battery level, temperature, condition of line-voltage and others in clear graphical displays. Disruptions can be reported by e-mail, mobile phone or fax.

# UPS management SNMP CS 141

CS141 adapters are available as stand-alone version and as a slot card. Both constructions are to have a fully equipped standard version and as a budget version is excluded functionality. For some UPS models you particularly compact and space saving of the CS 141 Mini available.

### Software view

### Characteristics

- Available for Windows for all common Windows OS, Netware, Macintosh, UNIX and VMS
- UPS monitoring via floating contacts or serial interface
- Local or network shutdown on up to several hundred computers
- Integrated SNMP subagent (RFC 1628)
- Graphical interface with all UPS information

- Graphical interface on UNIX, MAC, VMS
- Event-based dispatch of network messages
- Event-based dispatch of e-mails and SMS
- Logging of all UPS status information and measurements in MS-Excel file
- Schedulers for time-controlled execution of reboot, shutdown etc.

### Characteristics

- Compilation of data from EFFEKTA UPSs via one of the serial ports.
- Providing status information on several webpages through the embedded Web server.
- Execution of user-defined events, such as the controlled shutdown of multiple computers via RCCMD in case of system hazard.

# Accessories ATS-16 / 30 A

The ATS-16 is a transfer switch for 1-phase electricity networks and switches between two power sources (manually or automatically). So it ensures a redundant power supply connected equipment up to 16A.

EFFEKTA recommends to use a VFI UPS system as power source.

### Characteristics

- Break-Before-Make-Switching
- Protection against backfeed (EN62310-1)
- Overload and short circuit protection
- Redundant power supply (source 1 and 2)

### Specifications

- 24 months warranty

# Accessories STS 100-800 A

The STS is used as a transfer switch in 3-phase power grids and switches between two power sources (manually or automatically). So it ensures power supply redundancy of connected devices from 100 to 800A. Break-Before-Make-switching prevents both power sources being connected simultaneously to the consumer.

### Characteristics

- Permanent monitoring of the power sources
- Break-Before-Make Switching
- Automatic switching back

- Front access to all power components
- Neutral with 2 x Inom
- Interfaces: RS 232, RS 485 (MODBUS protocol)
- Double maintenance bypass prevents cross connection

## Accessories External Bypass

To ensure the highest possible availability of the EFFEKTA®- UPS systems, in particular in critical applications, bypasses are used which bypass the UPS during maintenance work and continue to supply power to the load without interruption after manual switching.

External Bypass	А	В	с	D	E
UPS connection type	1-phase IEC 16 A 6 x IEC 10 A 1 x IEC 16 A	1-phase (Schuko, IEC, terminals)	3/3p, 3/1p, 1/1p (hard-wired)	3/3p, 3/1p, parallel (hard-wired)	3/3p, parallel (hard-wired)

# Accessories **EBU**

The electronic breaker unit EBU is a selective protection of the loads.

The short-circuit current provided by UPSs is usually not enough to trigger a conventional thermal-magnetic overcurrent protection. If a load causes a short circuit, the entire UPS and thus each load is switched off. The EBU prevents this failure of the whole system. Only the affected load path is switched off, all other supply strings continue to operate.

# Accessories Relay cards

The relay card is an electronic module which is used for the potential-free exchange of signals between a UPS and a higher-level controller. The user thus has the possibility of receiving completely galvanically separated signals from the UPS and sending commands to the UPS.

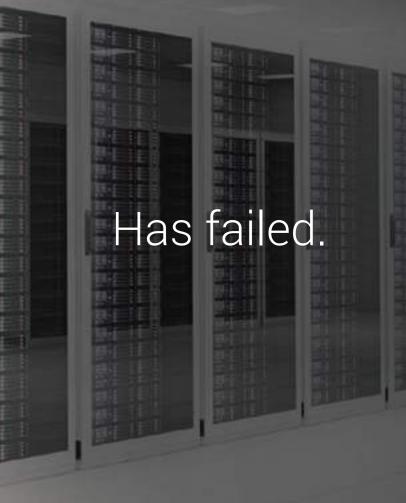

The output signals remain until the UPS is switched off and de-energized. Generally speaking, the UPS (and thus the relay card) is de-energized, all contacts of the relay card open, regardless of whether they are configured as normally closed or normally open.

## **Ready for operation.**

DC Power supplies

## DC UPS DIN rail DCH series

Reliability and availability in a small space. The DCH series power supplies with UPS function are the most compact of its kind and impress with extraordinary overload behavior. They are characterized by a variety of applications and their robust IP 20 housing is the perfect solution for all DIN rail applications. By the power boost mode, the DCH offers 300% of the rated power for 4 seconds or 200% for 4 minutes. Thus, it can be used as a reliable overload protection and is ideally suitable for consumers with high inrush currents, such as electric motors.

**Optionally temperature-controlled charging:** External temperature sensor for optimal temperature controlled charging voltage.

**One device for many battery types:** Since the user can select several predefined charging curves via jumper, the DCH series is suitable for all types of batteries. Standard open and sealed AGM or lead-acid batteries can be used. Ni-Cd and Li-ion batteries can be used optionally. Recharging is done via automatic 4-step battery charge according to IUoU. A "boost" charge is selectable.

**Wide range of applications:** A variety of certifications (including UL 60950-1, CE) enables the global use of the DCH series as well as in areas where specific standards are required.

**Extensive diagnostics:** Errors are detected early through comprehensive measurements, such as: battery not connected, sulfated battery, short circuit, reverse polarity of the connections or suitability of the type of battery (voltage test).

Wide input voltage range: The DC UPS can be operated in an extremely wide input voltage range of 90 to 305 V.

**Reliable technology:** The components of the DCH series represent a highly reliable and efficient technology with an MTBF of> 300,000 h according to IEC61709.

**Effective technology:** Thanks to the use of advanced technology, the DCH series reaches an efficiency of more than 91%.

**Communication and control:** Electrically isolated relay contacts are available to monitor the power supply. Further communication interfaces: MODBUS devices > 400W, Integration and configuration via separate software, Interface for parallel operation: redundancy or capacity expansion on certain models possible (see specifications).

## DC power supply **DC ST801**

#### DC ST801, 48 VDC, modular, up to 3 x 850 W

The DC ST801 power supply system is designed for various applications such as DC UPS systems or TPS applications. It provides superior reliability at an extremely compact space, including processor controlled battery charging, programmable relay contacts and configurable DC outputs. Numerous options provide solutions for global applications in different environments. This system is prepared for up to 3 rectifiers GR 850.

# DC power supply **DC ST802**

#### DC ST802, 48 VDC, modular, bis 6 x 850 W

The ST802 DC power supply system is designed for various applications such as DC UPS or TPS applications. It offers high reliability at an extremely compact space, including processor controlled battery charging, programmable relay contacts and configurable DC outputs. This compact slide contains controllers, deep discharge protection (LVD), priority load shedding (PLD) current sensors, battery fuses and up to 12 separately fused DC outputs. These features together with the very short depth are the key factors for the success of this power system, offering cost-effective and reliable solutions.

#### **EFFEKTA**<sup>®</sup>

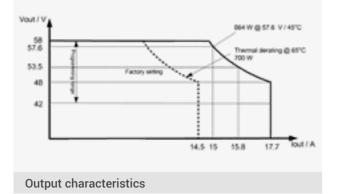

# Rectifier GR 850

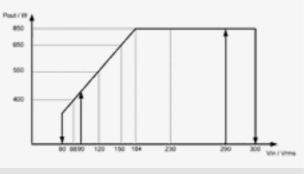

The GR 850 is a singlephase, «hot-pluggable», fan-cooled rectifier. With its exceptional power density (30 W / in<sup>3</sup>) it offers optimal solutions for the 1 U' shelf DC ST801 and the 2 U' shelf DC ST802 in the power range from 850W up to 5100W.

The small installation depth and the large temperature range are further advantages of this modern rectifier. The high efficiency (up to 95, 2%) guarantees an energy-saving operation. In addition less cooling energy is needed. Due to the temperature- independent fan control, a low noise level is achieved.

#### Characteristic curves

Input characteristics

### Characteristics

- Space saving very high power density
- Low inrush current
- Energy saving High efficiency up to 95,2 %
- Simple installation Hot pluggable
- Low noise level
- Wide input voltage range 80 ... 300 Vrms

General	Efficiency	≥ 95,2 %

# Controller Orion

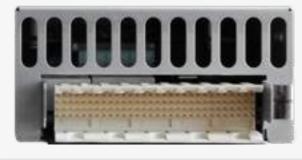

The Orion System Controller is the latest release of the central control unit for the EFFEKTA® DC power systems. The user-friendly display provides the main information about the state of the power supply system. New features such as the "efficiency mode" can help to reduce operating costs of the systems. In this case are unused modules, for example at lower load shut down in order to increase the efficiency of the system. An integrated web server provides a user-friendly interface with a standard Web browser for both local and remote communication. The communication with the connected components via CAN bus.

# Rectifier GR 2000E

GR 2000E is a single-phase, "hot-pluggable", fan-cooled rectifier. With its exceptional power density, it enables optimal solutions for various system carriers with a total output of standard 1 to 14KW. The small installation depth and the large temperature range allow compact and flexible installations. The high efficiency guarantees energy-efficient backup solutions, thanks to the low losses less cooling energy is needed. With the advanced controller adds the power solution can optimize the running costs of the entire system.

# Charger CHA series

The EFFEKTA® chargers offer a rapidly and gently charging process with IUoU-characteristics. Thereby they are ideal for charging lead-gel, lead-acid and AGM batteries. This 3-steps constant current charging in professional quality, batteries charge faster and more gently than comparable units on the market, whereby the service life of the batteries significantly increase. With the IUoU-characteristics, charge occurs with constant current until the gasing voltage.

# Batteries **BT series**

Our long-standing experience with emergency power systems and uninterruptible power supply units is our guarantee for the highest quality and reliability of EFFEKTA® batteries.

EFFEKTA® batteries are modern AGM (Absorbent Glass Mat) accumulators. Low levels of self-discharge are achieved by bonding the electrolyte in glass-fibre mat. A recharge is needed every six months unless the accumulator was stored at temperatures in excess of 20°C. AGM batteries are leak proof and can be installed in almost any location.

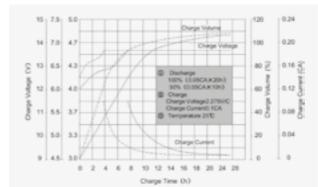

#### Advantage

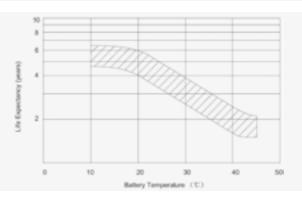

- Fully maintenance-free
- Excellent high-current capability
- Classified as non-dangerous in accordance with IATA
- Cycle-resistant
- Robust construction
- Location-independent
- Valve-regulated plastic container as overload protection

#### **EFFEKTA®**

#### **EFFEKTA®**

The storage modules comprise a lithium iron phosphate (LiFePo4) accumulator and an integrated battery management system (BMS) which constantly monitors the status of individual cells and these also provide protection against excessive levels of charge, voltage and temperature. This is how the BMS prevents an accumulator from failing prematurely as a result of ambient factors or operator error.

The modular layout permits individual configuration of the storage system to achieve the required capacity level, simply by connecting the desired number of modules together.

#### Specifications

US2000 Plus	
Technology	Lithium iron phosphate (LiFePo
Nominal voltage	48 V
Rated capacity	50 Ah / 2,4 kWh
Usable capacity (90% DoD)	45 Ah / 2,2 kWh
Discharge voltage range	45,0 54,0 V
Charging voltage range	52.5 54,0 V
Recommended charge / discharge current	25 A
Maximum charge / discharge current	50 A / Peak: 100 A (2C) für 15 s.
Communication	RS232, RS485, CAN
Weight	24 kg
Dimensions	440 x 410 x 89 mm
Temperature range at charge	+0 +50°C
Temperature range during discharge	-10 50°C
Life time	over 10 years
Cycle life	over 4500 at 90% depth of disch
BMS / monitoring	Integrated battery management
Certification	TüV / CE / UN38.8

# Batteries US2000 Plus NEW

#### Solar lithium storage system, 48 V / 2.4 kWh

The US2000 Plus is a latest-generation lithium storage unit: Combining maximum safety with a long service life - even when at low levels of charge on a regular basis - it meets the demanding requirements for the storage of solar power. The characteristically fast charge and discharge properties of lithium batteries enable them to store or to release a large amount of power in a short period. The US2000 Plus is therefore predestined for use in solar storage solutions for private households.

#### Characteristics

- Extremely resistant to cycles anticipated service life in excess of 10 years with more than 4500 charge/discharge cycles at 90% DoD
- Modular system for individual scaling of the storage system
- High peak charge and discharge ratings of up to 4.8 kW per module can be achieved
- Absolutely failsafe lithium technology lithium iron phosphate / LiFePo4

- Very high storage capacity ratio lightweight and compact design
- Horizontal or vertical set-up, optionally also 19" rack mounting
- Integrated battery management system
- Compatible with Series AX solar inverters in the EFFEKTA range
- 24 months' warranty

US2000 Plus is the ideal energy memory in conjunction with the EFFEKTA AX PV inverters. These are superbly equipped as a storage solution for solar or standalone mode with battery support.

Consumers are supplied with electricity from the PV modules on a priority basis. In the first instance, if the PV power supply fails or is insufficient, the batteries deliver the required power. Once the batteries have discharged, the AC source (public power grid) cuts in. Surplus power from the PV modules is used to charge the batteries. Whenever the PV and AC power supply fails, consumers continue to be supplied by batteries.

#### **EFFEKTA**<sup>®</sup>

# Management BACS II

The second generation of patented "Battery Analysis & Care System" is the most innovative product on the market. It provides a battery monitoring and management system integrated in the network. On a cyclical basis, it tests the internal resistance, temperature and voltage from each individual accumulator and enables the individual batteries to be balanced or 'equalized'.

In addition, BACS can also manage ambient measurement values (temperature, humidity, acid level, hydrogen concentration etc.).

The free BACS VIEWER software shows the EQUALIZING of a battery (wide purple line) during a discharge/charge process.

BACS EQUALIZING prevents the overcharging of this accumulator while other accumulators are in need of further charging.

Charging characteristics of accumulators with BACS-patented equalizing. This limitation prevents battery 3 from 'gassing'. Battery 2 continues to receive power until it reaches end-of-charge voltage. Battery 1 performs perfectly and is not controlled.

### Characteristics

- Monitoring, individual charging / discharging and alarm system for accumulators
- Avoid unnoticed or surprising battery failures

#### Features

Monitoring and feedback control of the charging process: The system was developed to monitor and control lead-based accumulators that are supplied by a shared charger device in series connection.

**Individual block voltage control:** BACS® individually controls the voltage provided to each accumulator by the charger and UPS. The result is a homogenous system of accumulators that extends their service life and capacity as well as their resistance to sulfation and corrosion. This feedback control process is patented under the name of EQUALIZING.

Protection against excessively high/low charge levels: The EQUALIZING process protects against damage by undetected overcharging of accumulator

damage by undetected overcharging of accumulators (gases, drying out, overheating). The EQUALIZING process protects against undetected undercharging of accumulators (sulfation, loss of capacity).

**Signaling of battery problems:** Typical battery problems such as sulfation, corrosion, gassing, drying out, overheating etc. can be detected from an increase in impedance and temperature.

**Problems caused by sulfation:** These are typical of UPS batteries because they are continuously receiving a maintenance charge. In a conventional charging process for the accumulators where the boost charge switches to a maintenance charge, it is not possible to guarantee that every accumulator has reached its full charge capacity. This can lead to a few accumulators becoming overcharged while others never actually reach a full charge. EQUALIZING prevents sulfation by balancing out the overcharged and undercharged accumulators.

Extend the battery life and maintain the functionality of the entire system

**Protection of neighboring batteries:** The EQUALIZING process balances out the different voltages and this prevents damage to the neighboring batteries. **Optimization of capacity:** Through EQUALIZING, BACS® guarantees a full charge level and therefore the optimum capacity of the entire battery system.

**Early warning of battery replacement:** The impedance analysis achieves an early warning of accumulators that have been damaged previously and are therefore less powerful. The sooner these accumulators are replaced, the longer the anticipated service life of the entire system.

**Battery alarm system:** By monitoring key parameters from the accumulators and measurements with defined threshold values, the system is capable of generating advance warnings in visual and acoustic form via network messages to attract the attention of the user.

**Maintenance:** A BACS system optimizes the quality of service through remote monitoring via Internet, VPN or other networks and the download of realtime data and the battery history for long-term analysis. Single, individual battery tests are possible without the overhead of disconnecting the battery from the group and of shutting down the system.

**Power Manager:** A BACS system receives a fully qualified UPS/SNMP and MODBUS Manager.

**Free BACS VIEWER analysis software:** Facilitates the graphic display of BACS analysis and reports.

#### **EFFEKTA**<sup>®</sup>

## Technology

The functional reliability of a power supply based on accumulators can only be assured if every accumulator is 100% available at all times.

The BACS® battery modules have a test circuit that performs a precise measurement of the internal resistance, temperature and voltage of every individual accumulator. The data are transmitted to the BACS WEBMANAGER by a bus system that also and at the same time takes charge of the management of UPS units, inverters, proximity sensors and other devices.

The BACS WEBMANAGER forms the control unit of the system that collects and evaluates all information and stores it on an internal, non-volatile memory unit. A web browser display presents the current status of accumulators while a second display shows the current UPS data and a third shows the ambient data and the alarm contact status. The interface for the web browser was specifically designed for convenient configuration and for the display of all current system data.

The EVENT MANAGER is the programmable interface for automatically generated reactions in the event of an alarm.

The BACS® system limits the charge for overcharged accumulators to prevent gases and drying. Every accumulator receives the optimum charge voltage from the EQUALIZING process and this also prevents an undercharge scenario.

By limiting charge voltages on the accumulator blocks, a substantially higher service life and greater reliability of the entire system can be achieved.

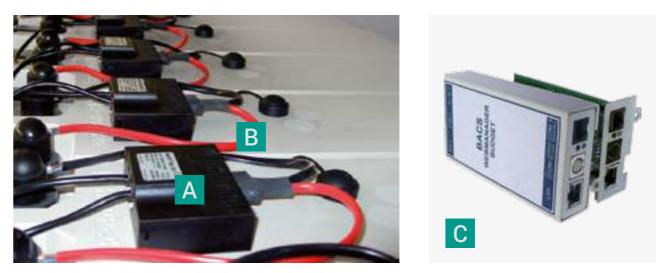

This early warning system makes it possible for the user to be made aware of the weakness of individual batteries long before it is too late. If for example the onset of sulfate deposits is starting to cause an increase in impedance, the user can reverse this effect through several charge/discharge cycles. The outcome of this 'battery training' can be seen immediately from the internal resistance figure. Alongside the level of internal resistance, the system monitors voltage, temperature, Equalizing activity and number of charge/discharge processes. Every time data limits are exceeded, corresponding alarms are forwarded by the network or by an (optional) modem, in the form of an e-mail, SMS, SNMP or RCCMD Trap. These other options are also available: e-mail-to-SMS, MODBUS, acoustic alarm, visual alarm (LED MATRIX), alarm contacts, PROFIBUS, LONBUS.

Whenever an alarm occurs, an acoustic warning signal is communicated to the user locally on the BACS device. An alarm LED on the module and on the BACS system also displays the alarm visually. Furthermore, an alarm contact transmits the signal to external monitoring devices.

The BACS WEBMANAGER units are equipped with large Flash-ROM memory units or SD memory boards that log all system data for at least 6 months and for up to 10 years, depending on the size of the BACS system. All data can be downloaded and archived by the network to release memory capacity for further data logging purposes. The data are analyzed by the BACS Viewer software.

The alarms on the other devices connected to the BACS WEBMANAGER (e.g. UPS) are also logged in separate files with a timestamp, and are also displayed on the web interface. The BACS WEBMANAGER is equipped with a real-time clock for precise logging purposes. In addition, time is synchronized automatically with a network timeserver (SNTP). Rising levels of internal resistance in an accumulator caused by corrosion or sulfate deposits triggers an alarm. Alarm values can be defined to equalize different types of battery and charge curves.

#### System components

## **A** C20, C30, C40 modules

- Battery modules for the monitoring of individual blocks and for optimum use of battery capacity and an increase in period of use
- Patented EQUALIZING function for charging and the distribution of voltages, Efficient balancing of voltages
- 12V, 6V and 2-4V version
- External, precise temperature sensor
- Measurements for every individual accumulator via voltage, temperature and impedance
- LED display for status and alarm statuses
- Central programming
- Closed and flame-resistant plastic housing
- Easy installation or retrofit with pre-configured cables and Velcro® mounting
- CE and ETL (and/or UL)-certified
- FCC Class A-tested

#### **B** Cables

- Measuring cable with integrated DC fuses, as cable and module protection with high-ohm batteries
- Simple installation by plugging in the bus cables
- Specialist bus communication cables with high level of resistance to electromagnetic interference

#### C Webmanagement

#### External and UPS slot version

- Administration of up to 256 BACS C modules in 1-10 parallel lines
- Individual management of the accumulators
- Power supply range 9-30V
- Includes a fully qualified UPS Web / SNMP Manager
- Simple installation with integrated DIN rail bracket

#### Interfaces

- COM 1 for management of a UPS / Inverter
- COM 2 for optional proximity sensors
- 1 programmable relay output

#### Administration and measurement

- Integrated configuration and status display
- Management of all threshold values
- Network notification system

#### Storage

Data storage of all measurement values in log files

#### Options

- Power converter for evaluation of charge / discharge levels
- Modem analog/GSM for integration in UNMS II with tele-assistance system
- Alarm message via remote LED matrix display and acoustic signaling

#### **EFFEKTA**<sup>®</sup>

## Modules

General data	
Construction	Measuring modules with equalizing BACS patent no.: DE 102004013351.4
Power supply	30mA (normal operation) in "Sleep Mode": < 1m A (REV 1.6)
Measuring tolerance	Internal resistance: < 10 %, voltage: < 0,1 %, temperature: < 5 %
Interfaces	2x RJ10 for BACS II Batterie Bus, intern RS232 Bus interface, 1x button for addressing, temperature sensor -35 to +85 °C, LED (alarms red/green, operation red/green)
Housing	80 x 55 x 27mm (HxWxD), 75g ABS housing (UL-certified, of low flammability, air slots), IP 30, Coated version (optional), IP 42 (dust and condesate)
Environmental conditions	Temperature 0 - 60°C max. humidity 90%, non condensing

#### Module BACS® C20

Use	Module for 12Volt 7-600 Ah lead batteries 150m A equalizing
Measuring range	7V – 16V
RI range	0.5-100m0hm
Equalizing current	0.15 A

Module BACS® C30				
Use	Module for 6Volt 7-900 Ah lead batteries 300m A equalizing			
Measuring range	3V - 9V			
RI range	0.5-70m0hm			
Equalizing current	0.3 A			

#### Module BACS® C40

	•
Use	Module for 2-Volt 7-5000 Ah lead batteries such as C42, but with a high-precision resistance measurement in MicroOhm. With high-perfor- mance equalizing. (more than 850 mA)
Measuring range	0.6V - 6V
RI range	0.05-30m0hm
Equalizing current	1.0 A

Module BACS®

#### Accessories

BACS®II	BUS CONVERTER 3
Design / Version	To adjust level and protocol from BACS Batterie Bus to BACS II WEBMANAGER Budget
Power supply	External connector mains unit 12V/800mA (standard, up to 160 module), optional 12V/1400mA, up to 256 module
Interfaces	2x RJ10 for BACS II Battery bus 1x RJ12 for COM3 WEBMANGER Budget 1x Mini Din8/RS232 Interface for serial connection to the PC. On CONVERTER 3, an adapter is needed. 1x 2,1mm DC female barrel connector (external) 1x Potential-free contact (2-pin screw terminal for max. 1,0 mm <sup>2</sup> , 125 VAC, 60 VDC and 1A)
Display / Signal	LED / Alarm buzzer with an Acknowledge button Optional: Adapter from mini-8 to RS232 for BACS CONVERTER 3, connection cable Mini-8 1.5m
Housing	Polystyrene housing, gray
Dimensions (w x H x D)	91,5 x 67 x 25mm
Weight	120 g
Environmental conditions	Temperature 0 - 60°C, max. humidity 90%, non condensing

BACS® II BUS CONVERTER 3

BACS DC Current sensor 300/400

BACS DC Current sensor 500/1000

Conversion and galvanic separation of the BACS battery bus to the BACS II WEB-MANAGER Budget. External wall wart 12V / 800mA (default for up to 160 modules), optional 12V/1400mA, for up to 256 modules. 2x RJ10 for BACS II battery bus, 1x RJ12 for COM3 WEBMANAGER Budget, 1x MiniDin8/ RS232 interface for serial connection to workstation. For CONVERTER 3 an adapter is required (see below), 1x2,1mm DC connector socket for power supply (external).

DC Current sensor for measuring battery string discharge and charging process +/-300A or rather 400A DC. Viewable through Webbrowser and BACS VIEWER. Pluggable system.

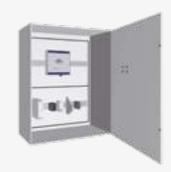

DC Current sensor for measuring battery string discharge and charging process +/-500A or rather 1000A DC. Viewable through Webbrowser and BACS VIEWER. Pluggable system.

Control Cabinets

#### Control cabinets for BACS systems - ready to install

#### BACS®II CONTROL CABINET type 1

#### BACS®II CONTROL CABINET type 2

BACS®II CONTROL CABINET type 3

With optical and audible display on the outside door, protection class IP 56. Only power supply and Ethernet cable has to be provided by the customer. Easy connection of inputs and outputs through a strip terminal.

BACS®II CONTROL CABINET Type 1				
This includes	1x BACS WEBMANAGER BUDGET II, 1x 12V Power supply (100-240V, 50/60Hz), 1x CAT 6 Ethernet socket, 1x Alarm contact (potential-free)			
Integrated into frontdoor:	1x POWER LED, 1 x BACS ALARM LED, 6 x spare bus communication cables			
Dimensions	400 x 500 x 210 (WxHxD)			

BACS®II CONTROL CABINET Type 2				
This includes	2x BACS WEBMANAGER BUDGET II, 2x 12V Power supply (100-240V, 50/60Hz), 2x CAT 6 Ethernet socket, 2x Alarm contact (potential-free)			
Integrated into frontdoor:	2x POWER LED, 2x BACS ALARM LED, 8x spare bus communication cables			
Dimensions	400 x 500 x 210 (WxHxD)			

BACS®II CONTROL CABINET Type 3				
This includes	3x BACS WEBMANAGER BUDGET II, 3x 12V Power supply (100-240V, 50/60Hz), 3x CAT 6 Ethernet socket, 3x Alarm contact (potential-free)			
Integrated into frontdoor:	3x POWER LED, 3x BACS ALARM LED, 10x spare bus communication cables			
Dimensions	500 x 500 x 210 (WxHxD)

# Solar power

#### **EFFEKTA**<sup>®</sup>

# Solar inverter KS series 1,5-5 KW

EFFEKTA KS solar inverters, as part of a photovoltaic system, convert direct current from solar modules into alternating current, and feed this into the electrical power grid. At the input end there is usually a DC converter with Maximum Power Point Tracker (MPPT) that supplies power to the intermediate circuit. There is a single-phase inverter at the output end that supplies power to the power supply grid and that is synchronized automatically with that power grid. The KS series of solar inverter with an output rating of 1500 to 5000 Watts is ideal for private use. These inverters are available as models with 1 MPP Tracker (ST) or 2 MPP Trackers (DT).

#### Details

Control panel of DT

#### View of the underside

Bottom of the DT models (2 MPPT trackers) with DC connector panel, AC output, communication ports, and optional integrated DC disconnect switch (view without cooling fins)

#### Characteristics

- Euro efficiency up to 96.8%
- High MPPT accuracy
- Fast MPPT calculation method
- Extreme low power loss at night
- Very high conversion efficiency
- Perfect cooling concept
- No derating up to 50°C during operation

#### Specification

\* Exceeding or outside of MPPT voltage range: Error message, no power feeding

\*\* Accordance to VDE-AR-N-4105

- Easy to install
- DC cable connection without special tools
- Comprehensive electronic protection
- Monitoring of insulation resistance
- LCD panel with data (monitoring / operation)
- RS232/RS485 communication (optional WLAN)
- DC switch can be integrated into the housing

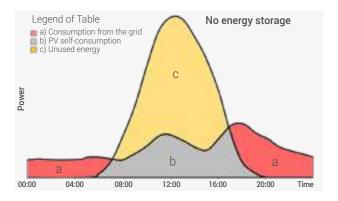

#### **EFFEKTA**<sup>®</sup>

# Multifunction inverter **AX series**

The AX Series is a multi-function inverter / PV charger with the combined functions of an inverter and MPPT solar and battery charging device. These inverters are suitable for off-grid stand-alone operation with PV modules, but can also be operated with power from batteries, generators or the public power grid. With insufficient power from the PV modules, the device automatically adds on battery power or when the batteries are empty it switches over to the power grid. Three AX-inverter in combination can be configured for three-phase operation. For higher power requirements up to 6 units (4 or 5kVA models) with a maximum output of 24kW (30kVA) can be optionally connected in parallel.

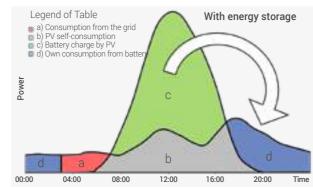

#### Optimized own use of solar power

Typical hourly energy production and consumption in a household with photovoltaic system without energy storage:

At night the photovoltaic system produces no electricity, so the required energy is obtained from the public grid (a). During the day excess energy gets lost (c), because the complete amount of electricity produced cannot be consumed (b).

Typical Day course for a household with PV system and energy storage:

During the day the battery is charged with the excess energy (c). At night, a large part of the necessary energy is obtained from the energy storage device (d). The PV energy yield (b) + (d) is now much higher because the purchased energy from the grid is much lower (a) Depending on the configuration of the batteries, the energy loss can decrease to negligible values.

#### Characteristics

- Parallel operation of several inverters possible
- 3-phase operation possible
- Pure sine wave output
- Built-in MPPT solar charge controller
- Configurable via LCD display or PC software
- Auto restart when mains power returns
- Overload / over temperature / short circuit protection
- Island operation possible
- Optimized charge process for perfect battery performance ("Smart Charger Design")
- 12 months warranty
- Solar power, AC Mains power supply, 24 o. 48 VDC battery (PWM auch 12 VDC)

#### MPPT suitability

- Superior in temperate regions (Ø 25° C)
- To prefer for services exceeding 500W
- Preferable with load fluctuations
- Suitable for higher yields
- Ideal for the optimal operating point to choose on the current-voltage curve

#### PWM suitability

- Suitable for constant power / charge conditions
- Suitable for smaller PV systems
- More cost-effective variant
- Suitable for uniform, hot climate conditions

#### AX-M series

- MPPT Solar Controller
- 800, 1600, 2400, 3200, 4000W rated power
   24 / 48 V DC

#### AX-P series

- MPPT Solar Controller
- With increased PV power (see specifications)
- 1600, 2400W rated power
- 24 / 48 V DC

#### AX-K series

- PWM Solar Controller
- 800, 1600, 2400, 3200, 4000W rated power
- 12, 24, 48 V DC

#### **EFFEKTA**<sup>®</sup>

# Multifunction inverter **AX-M1**

The devices in the AX M1 series with integrated MPPT solar charge controller are multi-function inverters / PV chargers with the combined functions of an inverter as well as a solar and battery charging device. These inverters are suitable for standalone operation independent of mains supply via PV modules but can also be operated with electrical power from accumulators, generators or the public power supply grid. If insufficient power is being supplied from the PV modules, the device automatically tops up the power level with battery current or, if the batteries are discharged completely, it switches over to the mains power grid. A network of three AX units can be configured for 3-phase operation.

#### Details

View of the underside AX-M1

Monitoring Box (WiFi Box)

With the monitoring box (WiFi box), the power generation data can be called up via WLAN from a PC, smartphone or tablet PC in the web browser.

#### Characteristics

- PV inverter without mains power supply
- Island operation possible
- 4000, 5000 W nominal load
- 24, 48 VDC Battery voltage
- PV- / Battery chargert with 3-stage charge
- Battery voltage thresholds can be adjusted individually
- No more external neutral-point emulation is required
- To be preferred for PV module performance levels
- Suitable for higher yields with MPPT
- Several power sources
- Parallel operation by up to 9 inverters
- 3-phase operation is possible
- Sine-wave output
- Can be configured via LCD display or PC software
- Automatic reboot when mains power is restored
- Protection against excessive loads and
- temperatures as well as short circuits
- 24 months' warranty

#### Specifications

# Multifunction inverter **AX-P1**

The devices in the AX P1 series with integrated MPPT solar charge controller are multi-function inverters / PV chargers with the combined functions of an inverter as well as a solar and battery charging device. These inverters are suitable for standalone operation independent of mains supply via PV modules but can also be operated with electrical power from accumulators, generators or the public power supply grid. If insufficient power is being supplied from the PV modules, the device automatically tops up the power level with battery current or, if the batteries are discharged completely, it switches over to the mains power grid. A network of three AX units can be configured for 3-phase operation.

#### Details

View of the underside AX-P1

Monitoring Box (WiFi Box)

With the monitoring box (WiFi box), the power generation data can be called up via WLAN from a PC, smartphone or tablet PC in the web browser.

#### Characteristics

- PV inverter without mains power supply
- Island operation possible
- 3000 W nominal load
- 24, 48 VDC Battery voltage
- PV- / Battery chargert with 3-stage charge
- Battery voltage thresholds can be adjusted individually
- No more external neutral-point emulation is required
- To be preferred for PV module performance levels
- Suitable for higher yields with MPPT
- Several power sources
- Sine-wave output
- Can be configured via LCD display or PC software
- Automatic reboot when mains power is restored
- Protection against excessive loads and
- temperatures as well as short circuits
- 24 months' warranty

#### **EFFEKTA**<sup>®</sup>

# Application scenarios **AX series**

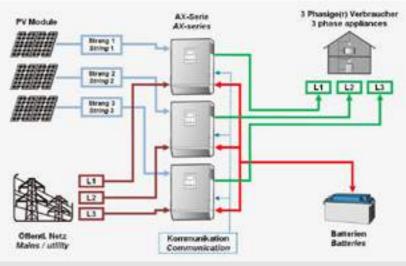

The operating principle of the AX-inverter includes the supply with batteries in case of failure of other energy sources.

Operation is possible with AGM, gel, NiCd, closed leadacid battery (OpzS, OpzV...) and lithium. The batteries are charged via the integrated charger with 3-stage charge.

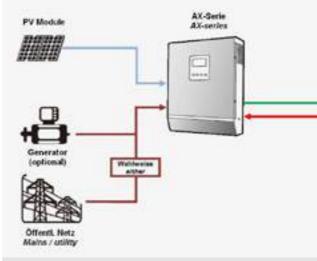

EFFEKTA® recommends the US2000 Plus lithium battery storage unit for the PV system. For further details, please refer to page 96.

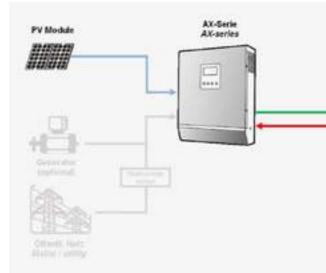

## Typical configurations

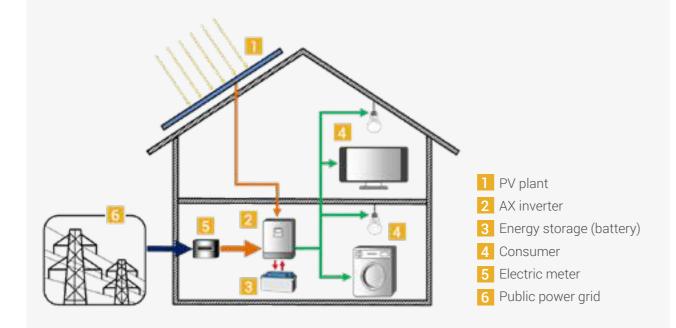

3-phase operation

Solar powered with battery backup

Basic principle

Stand-alone ("Island-") operation with battery backup

A single AX inverter is required for each phase. Only one battery system is used and shared by all three inverters.

The inverters communicate with each other and generate a three phase current network.

With this configuration, an entire house can be supplied with three phase power easily throughPV and energy storage.

At too low PV power, the energy required is first taken from the battery. If this is empty, the missing electricity is provided from the AC source.

PV modules and AC source (mains or generator) are required. Consumers primarily are powered from the PV modules.

When there is no or insufficient PV power initially, batteries provide the energy needed. When the batteries are empty the AC source jumps in.

Surplus energy of the PV modules is used to charge the batteries.

Upon failure of PV and AC power supply is powered on on batteries.

The load is supplied by the inverter, which draws the energy from the PV modules. There are no AC sources.

With sufficient PV power, the batteries are charged by PV. The charge is made exclusively with PV.

Upon failure of the PV supply (eg. night mode), consumers can be supplied via the batteries.

Missing PV power of inverter (low solar radiation) can be supplemented through the batteries.

# Service

#### Full maintenance contract

- Date: 1x annually
- Cleaning the installation
- Check-up of the mechanical condition and all installation parts
- Voltage check of AC current inter-circle
- Control and possible adjustment of oscillator-circles
- Examination and attitude of all electric control circuits of inverter and rectifier
- Control measurement of thyristors, diodes, transformers, filter elements etc, to guarantee a perfect operation of installation
- Capacity test of the batteries as customor requires
- Exchange of defective batteries
- Fault hotline (response time: 24 hours Mon-Fri 8am- 5pm)
- Spare parts and batteries via maintenance fee
- Minimum contract period: 4 years
- Invoice: via maintenance fee

#### Partial-maintenance contract

- Date: 1x annually
- Cleaning the installation
- Check-up of the mechanical condition and all installation parts
- Voltage check of AC current inter-circle
- Control and possible alignment of oscillator circles
- Examination and adjustment of all electric control circuits of inverter and rectifier
- Capacity test of the batteries as customor requires
- Spare parts covered by maintenance fee

#### Performance-based service

- Date: as customer requires
- Cleaning the installation
- Check-up of the mechanical condition and all installation parts
- Voltage check of AC current inter-circle
- Control and possible alignment of oscillator circles
- Examination and adjustment of all electric control circuits of inverter and rectifier
- Control measurement of thyristors, diodes, transformers, filter-elements etc, to guarantee a perfect operation of installation
- Capacity test of the batteries as customor requires
- Exchange of defective batteries after prior approval of cost estimate
- Invoice: at the valid EFFEKTA® cost rate

- Control measurement of thyristors, diodes, transformers, filter elements etc, to guarantee a perfect operation of installation
- Exchange of defective batteries after prior approval of cost estimate
- Fault hotline (response time: 24 hours Mon-Fri 8am- 5pm)
- 15% discount on batteries
- Minimum contract period: 4 years
- Invoice: via maintenance fee

# Terms & conditions

#### Preamble

The following terms and conditions for sales and delivery form the basis of the delivery and service contracts of the contractor (user) and supplement the applicable law.

They are only applicable to businesses where the contract is made in the course of their business, legal entities of the public law or special authorities under public law.

#### I. Application

1. Orders only become binding with regard to the type and scope of deliveries after the supplier confirms the order. Any changes and additions must be in writing.

2. Where ongoing business relationships subsist, these terms and conditions also apply to future transactions even where they are not expressly communicated to the orderer. The terms and conditions are deemed to be accepted at the latest when the order is placed or the delivery or service is accepted. If alternative provisions of the orderer or supplier are to apply instead of these terms and conditions, these must be expressly agreed by the partners.

3. Contrary or divergent sales terms of the orderer shall only be binding on the supplier if they have been expressly acknowledged by him in writing.

#### II. Prices

1. A binding price shall only be deemed to have been set after the supplier confirms the order in writing. This is subject to the proviso that the order details on which the order confirmation is based remain unchanged. The supplier's prices are in EUR exclusive of any VAT applicable at the time of the delivery, unless other information is specified.

2. If, in the course of a delivery period of more than four months, a change to the price basis occurs (increase in the price of raw materials, change of salary and wage rates), the supplier reserves the right to adjust the price accordingly.

3. Packaging, postage and other shipping costs are not included and will be invoiced additionally.

4. The orderer shall bear the costs of any changes to the product he requests after the order has been confirmed.5. Partial deliveries may be invoiced separately.

III. Delivery quantity, delivery period

1. Production-related over- or underdeliveries of up to 10% of

the order quantity are permitted.

2. The supplier is permitted to make partial deliveries.

3. The delivery periods commence with the date of order confirmation by EFFEKTA - Regeltechnik GmbH. The delivery periods specified by the supplier refer to the shipping date of the goods. They shall be deemed to have been observed if at this time the goods are dispatched from the factory or the orderer is informed that they are ready to be shipped.

4. The agreed delivery time is only applicable after all technical and commercial details have been settled.

Accordingly, all delivery times are provisional. Delivery times are only binding where they have been confirmed to the orderer as such in writing.

5. If action on the part of the orderer is necessary for the manufacture of an item or the execution of a delivery, the delivery period shall not commence until the orderer has fully completed this action.

6. In the event of a delay in delivery, the orderer may withdraw from the contract should a reasonable grace period expire without results. In the event of impossibility of performance on the part of the supplier, this right is available without the supplementary period.

Delay in delivery is deemed to amount to impossibility if delivery does not occur for more than one month.

Claims for damages (incl. any consequential loss) are excluded, without prejudice to clause 7; the same applies to reimbursement of expenses.

7. The exclusion of liability regulated by clause 6 shall not apply where an exclusion or limitation of liability for damages for death, personal injury or damage to health resulting from a wilful or negligent breach of duty by the user or vicarious agents of the supplier has been agreed; further, it shall not apply where an exclusion or limitation of liability for other loss resulting from a wilful or grossly negligent breach of duty by the supplier or a wilful or grossly negligent breach of duty by a legal representative or a vicarious agent of the supplier has been agreed.

Liability shall not be excluded where the supplier culpably breaches a fundamental contractual duty or a "cardinal duty", but instead limited to the foreseeable damages typical for the type of contract.

The above applies correspondingly in the event of reimbursement of expenses. 8. The limitations of liability stipulated in clauses 6 and 7 do not apply insofar as a commercial firm deal was agreed; the same also applies where the orderer can assert that he no longer has an interest in fulfilling the contract due to a delay for which the supplier is at fault.

9. In the event of forces majeures experienced by the supplier or his subsuppliers, the delivery time shall be prolonged by a corresponding amount. This shall also apply in the event of intervention by official bodies, difficulties with the supply of energy and raw materials, strikes, lockouts and unforeseen obstacles to delivery, insofar as these are not the fault of the supplier. The supplier shall inform the orderer of any such event without delay.

#### IV. Transfer of risk, packaging and shipping

1. Where the orderer collects the goods from the supplier's premises, risk passes with transfer of the goods to the orderer. Where the goods are shipped, risk passes on transfer of the goods to the carrier. Where the goods are delivered, risk passes when the goods leave the supplier's premises.

 In the event of delays to dispatch that are the fault of the orderer, risk passes on communication of readiness for shipping.
 Insofar as nothing else has been agreed, the supplier shall select the packaging and shipping type to the best of his judgment. Where requested in writing by the orderer, the goods may be insured against breakage, transport and fire damage at the orderer's expense.

#### V. Retention of title

1. The supplier shall retain title to the deliveries until all current and future amounts due from the business relationship have been settled, even where the purchase price of specifically designated amounts due has been paid. In the case of rolling invoices, the retained title of the deliveries (goods subject to retention of title) counts as a security for the payment of amounts due on the supplier's account.

2. In the event of conduct constituting a breach of contract on the part of the orderer, in particular late payment, the supplier is entitled to reclaim the goods. The orderer hereby agrees to the goods being reclaimed under these circumstances. Reclaiming the goods only represents a withdrawal from the contract where the supplier expressly declares this to be such. Any costs incurred by the supplier in reclaiming the goods (in particular transport costs) shall be borne by the orderer. Further, the supplier is authorised to prevent the orderer from selling on or processing the goods subject to retention of title and to revoke any direct debit authorisation that may have been issued. Once the purchase price and all costs have been paid, the orderer can require any goods reclaimed without an express declaration of withdrawal to be despatched.

3. The orderer undertakes to handle the goods with care.

4. The orderer may neither mortgage, pledge as security nor assign the goods delivered and corresponding amounts due.

In the case of seizure or other third-party intervention, the orderer shall immediately inform the supplier in writing in order for him to file a claim in accordance with section 771 of the Civil Procedure Code. Any remaining costs outstanding to the supplier despite successful litigation as per section 771 of the Civil Procedure Code shall be borne by the orderer.

5. The orderer is permitted to sell on, process or mix the goods in the normal course of business. In doing so he hereby assigns to the supplier all amounts due from selling on, processing, mixing or other legal grounds (in particular from insurance or non-permitted actions) to the extent of the final invoice amount agreed with the supplier (incl. VAT).

The orderer remains authorised to collect these amounts due even after assignment, without prejudice to the authorisation of the supplier to collect the amounts due himself. However, the supplier undertakes not to collect the amounts due for such time as the orderer fulfils his payment obligations from the revenue received, is not in default of payment and no application to instigate insolvency proceedings has been made and no suspension of payment is in force.

If this is the case, the orderer is required to notify the supplier on request of the assigned amounts due and debtors, to provide all information required for collection, to deliver up the associated documents and to notify the debtor (third party) of the assignment.

The direct debit authorisation may be revoked by the supplier in the event of breaches of contract (in particular payment default) by the orderer.

6. The retention of title also extends to the products arising as a result of processing, mixing or combination of the delivered goods to the extent of their full value, whereby these processes shall be deemed by the supplier to constitute manufacture. In the event of processing, mixing or combination

of the goods with goods to which a third party retains title, the supplier obtains co-ownership in proportion to the objective values of these goods.

7. For the purpose of securing the amounts due against the supplier, the orderer also assigns to the supplier the amounts due which arise in favour of a third party through the combination of the delivered goods with land.

8. The securities owing to the supplier are not included where the value of his securities exceeds the value of the secured claims by more than 30%.

9. The enforceability of the retention of title in the event of default on payment or exposure to loss and seizure of the delivered goods by the supplier represents withdrawal from the contract.

VI. Terms of payment

1. All payments must be made in Euros exclusively to the supplier.

2. Insofar as nothing else has been agreed, the purchase price must be paid via cash on delivery or advance cheque. In the latter case delivery shall proceed once the cheque has cleared. In exceptional cases payment terms of 14 days strictly net may apply.

3. If the orderer defaults on payment, the supplier is permitted to demand default interest at eight percentage points above the base interest rate. The supplier may at any time produce evidence of higher interest damages and charge for these.

4. Failure to observe the terms of payment, default or circumstances that pose a risk of reducing the orderer's creditworthiness will result in all of the supplier's claims becoming due for payment immediately. Further, the supplier is permitted after a reasonable grace period to withdraw from the contract or demand damages instead of performance.

5. The orderer may only exercise offsetting rights if his counterclaims have been legally established, are indisputable or have been acknowledged by the supplier.

6. The orderer is permitted to exercise a right of retention insofar as his counterclaim is based on the same contractual relationship.

7. The supplier is under no obligation whatever to accept cheques and bills of exchange. Credit of this type is in all cases subject to redeemability (on account of payment, not on account of performance) and is deemed to be redeemed on the day that redemption value is available to the supplier. In the case of bills of exchange, any discount on presentation, stamp duty, bank charges and any direct debit charges shall be passed on by the supplier.

8. The right to pursue any further contractual or statutory claims in the event of default is reserved.

#### VII. Responsibility for defects

If the orderer fulfils the duty of inspection, notification and rejection required of him in accordance with section 377 of the Commercial Code, the supplier is liable for defects of the delivery to the following extent:

1. In the event of a not inconsiderable defect of the purchased goods, the supplier may choose either to correct the defect or supply a defect-free product (supplementary performance). In the event of failure of the supplementary performance, the supplier is authorised to undertake a further act of supplementary performance. Further, in the event of repeated supplementary performance, the supplier decides between re-supply or correction of the defect. Should one or both of these methods of supplementary performance be impossible or not proportionate, the supplier is permitted to refuse them. The supplier may also refuse supplementary performance for such time as the orderer does not fulfil his payment obligations towards him proportionate to the defect-free part of the performance.

2. If supplementary performance as per clause 1 is impossible or fails, the orderer has the right either to reduce the purchase price accordingly or withdraw from the contract in accordance with the statutory provisions. These rights are open to the purchaser particularly where the supplier culpably delays or refuses the supplementary performance or if it fails for a second time. Insofar as the following (clause 4) does not provide otherwise, further claims of the orderer, regardless of their legal ground (in particular claims arising from the breach of contractual conditions and warranties, reimbursement of expenses with the exception of that provided for in section 439 subsection 2 of the German Civil Code, unlawful acts and other tortious liability) are excluded. This applies in particular to claims for damages beyond the thing purchased and for claims for the reimbursement of lost profits. This also covers claims that do not result from the defectiveness of the thing purchased.

3. The above provisions also apply to the delivery of a different item or a lesser quantity.

4. The exclusion of liability under clause 2 does not apply where an exclusion or limitation of liability for damages for death, personal injury or damage to health caused as a result of a wilful or negligent breach of duty by the user or wilful or negligent breach of duty by a legal representative or vicarious agent of the user has been agreed. It also does not apply where an exclusion or limitation of liability for other damages caused as a result of a wilful or negligent breach of duty by the user or wilful or negligent breach of duty by a legal representative or vicarious agent of the user has been agreed. Liability shall not be excluded where the supplier breaches a fundamental contractual duty or a "cardinal duty", but instead limited to the foreseeable damages typical for the type of contract. It is further excluded under clause 2.

The exclusion of liability shall not apply if liability for personal injury or material damage to privately used items in the event of defects to the thing supplied applies under the Product Liability Act.

Further, this also applies in cases covered by a guarantee by the supplier or where assurances were made as to specific properties of the goods purchased. Here a defect in this regard triggers the supplier's liability.

The above applies correspondingly in the event of reimbursement of expenses.

5. Claims for supplementary performance, damages and replacement goods/services are subject to a time limit of one year after delivery of the goods.

This does not apply to goods which have been deployed in a building in accordance with their standard application and have caused this to become defective. The time limit here is five years.

Claims for abatement and the exercise of the right to withdraw from the contract are excluded where the time limit for a claim for supplementary performance has been exceeded.

In the case of clause 3 the purchaser may refuse to pay the purchase price to the extent that he would be entitled in the event of withdrawal or abatement. In the case of an exclusion of withdrawal and subsequent refusal to pay, the supplier is permitted to withdraw from the contract.

6. Claims resulting from right of recourse to the producer are not affected by this section.

7. No liability is accepted for damage resulting from unsuitable or improper use, defective installation by the orderer or a third party, defective or negligent handling or natural wear. Further, the supplier bears no liability for any damages caused by unsuitable equipment, defective building work, replacement materials, chemical and electrochemical or electrical influences (insofar as these are not the fault of the supplier) and improper alterations or maintenance work made without prior approval of the manufacturer on the part of the orderer or third parties. The same applies to unauthorised re-working or improper handling.

8. Transport damages must be reported immediately to the delivering transport company. The carrier's instructions on subsequent procedure must be followed in all cases. Never should goods damaged in transit be sent to us either through us or the transport company without such instructions.

#### VIII. Breaches of duty

1. The supplier's liability for breach of duty is limited to grossly

negligent or wilful breaches of duty.

2. Any liability for the infringement of intellectual property rights of third parties is excluded, in particular when performing production tasks in accordance with the orderer's specifications. The supplier is not subject to a duty of scrutiny in regard to the intellectual property rights of third parties.

#### IX. Software

Insofar as programs are part of the scope of delivery, the orderer obtains individual unlimited usage rights, that is he may not copy them or use them for any other purpose. Multiple usage rights shall be subject to written agreement. In the event of an infringement of these usage rights, the purchaser shall be liable for the full extent of any resultant loss.

X. Place of performance, jurisdiction and applicable law

1. The place of performance is Rottweil.

2. The court of jurisdiction is Rottweil, insofar as the orderer is trading in the course of a business. The supplier is permitted to bring an action against the orderer in other permissible jurisdictions.

3. The law of the Federal Republic of Germany applies with regard to all claims and rights resulting from this contract. The application of UN sale of goods law (CISG) is expressly excluded.

#### XI. Closing provisions

1. Any changes to the contract or supplementary agreements are only effective if they have been approved in writing by the supplier.

2. Rights of the orderer arising from the legal transaction with the supplier are not transferable.

3. Should any individual provisions of these terms and conditions become partially or wholly ineffective or invalid, this shall not affect the validity of the remaining provisions. The parties to the contract undertake to agree to a ruling by means of which the purpose intended by the ineffective or invalid provision is largely achieved.

(As of: November 2006)
